

## Follow-up report No.60 (Final report)

Report reference: , Reference OIE : 36095, Report Date : 12/10/2020, Country : Belgium

### Report Summary

<b>Name of sender of the report</b>	Dr Herman Claeys	<b>Telephone</b>	+32 2 524 73 03
<b>Position</b>	Chef du Service Politique sanitaire : Animaux et Végétaux	<b>Fax</b>	+32 2 524 73 03
<b>Address</b>	EUROSTATION II - 7ème étage Place Victor Horta 40 Bte 10 Bruxelles 1060	<b>Email</b>	herman.claeys@health.fgov.be
		<b>Entered by</b>	Mme Selin kaymak
		<b>Date submitted to OIE</b>	12/10/2020

<b>Animal type</b>	Terrestrial	<b>Date of report</b>	12/10/2020
<b>Disease</b>	African swine fever	<b>Date of start of the event</b>	09/09/2018
<b>Causal Agent</b>	African swine fever virus	<b>Date of confirmation of the event</b>	13/09/2018
<b>Reason</b>	Recurrence of a listed disease	<b>Date of last occurrence</b>	1985
<b>Country or zone</b>	a zone or compartment	<b>Diagnosis</b>	Laboratory (advanced), Necropsy
<b>Number of reported outbreaks</b>	submitted= 668, Draft= 0	<b>Clinical signs</b>	Yes

### Outbreak details

Province	Number of outbreaks	Commune	Unit Type	Location	Latitude	Longitude	Start Date	End Date:

Wild boar:Suidae(Sus scrofa)	Animals	...	1	1	0	0			
Affected Population	<p>The finding concerns the remains (only bones) of a wild boar that has been dead for more than six months, so the death occurred before May 2019. The bones are dry and completely fleshless. The internal control qPCR beta actin performed twice by the National Reference Laboratory was negative. On the basis of the literature, the impossibility of demonstrating in the laboratory the presence of a remnant of the wild boar's DNA (negative beta-actin) in a bone found in the open air indicates that more than six months have elapsed since the death of the animal (cf. Article "Porcine bone samples left in open-air" - Biomedical Reports).</p>

Wild boar:Suidae(Sus scrofa)	Animals	...	1	1	0	0			
Affected Population	<p>The finding concerns the remains (only bones) of a wild boar that has been dead for more than three months, so before September 2019. The bones are dry and completely fleshless. The analysis performed by the NRL indicates an interval of 3 to 6 months of age (cf. article « Porcine bone samples/left in open-air" - Biomedical Reports). The site of discovery is situated in zone I. This part of the zone has already been completely isolated by fencing since mid-July 2019. These fences are part of the network of more than 300 km of fences installed to isolate wild boars in the delimited zones. The nearest case is in zone II, 3.7 km away, and dates from June 2019. It is located inside the same fenced area. Within this fenced area, the number of wild boars has been greatly reduced and is practically or already null.</p>
